

Innovating Pressure Ulcer Prevention

Leaf Healthcare's wireless patient monitoring system automates patient turning schedules.

Room	Patient	Time Until Next Turn	Position	Information
2301	M.S.	1:57	L <input checked="" type="checkbox"/> B <input type="checkbox"/> R	Upright
2302	C.M.	0:14	<input type="checkbox"/> L <input type="checkbox"/> B <input type="checkbox"/> R	
2303	S.S.	Turn Due 0:03 Over	L <input type="checkbox"/> B <input checked="" type="checkbox"/> R	
2304	M.L.	1:51	<input type="checkbox"/> L <input checked="" type="checkbox"/> B <input type="checkbox"/> R	Prone
2305	No Sensor			
2306	D.L.	0:10	<input type="checkbox"/> L <input type="checkbox"/> B <input type="checkbox"/> R	Upright

Improved Patient Outcomes

- Frequent repositioning is the standard of care for reducing risk of HAPUs¹
- Caregiver compliance with patient turning protocols is only 66%²
- Leaf Healthcare's wireless patient monitoring system demonstrated a sustained patient turn protocol compliance of 98% in a recent hospital study³

Dramatically Reduced HAPU Costs

- Pressure ulcers cost the US health-care system an estimated \$10 billion annually⁴
- Improved compliance with patient turning protocols results in fewer HAPU's and major cost savings
- For every one dollar spent on the Leaf Patient Monitoring System, over 6 dollars may be saved in reduced HAPU treatment costs⁵

Easy to Implement and Use

- The Leaf Patient Monitoring System requires no upfront investment or commitment to implement
- The wireless single patient use sensor monitors patient position and movement in or out of bed, without any cords
- Simple color-coded displays show patient turn history, current position status, and notifies if and when a staff assisted turn is necessary.
